Meridian Ventures

Meridian Ventures Fund I is the capital deployment arm of Meridian Capital Management Pte. Ltd., a Singapore-domiciled private banking institution serving HNW and UHNW clients across five Asia-Pacific corridors.

The fund deploys institutional capital at Series A to Series B stage in ventures creating a structural intersection with the private banking client network. Deal access, co-investment distribution, and due diligence intelligence compound across the same client relationships.

TARGET FUND SIZE

USD 150M to 250M

FUND LIFE

10 years from first close

HURDLE RATE

8.0% per annum

GP COMMITMENT

1% to 5% of commitments

STRATEGY

Series A to Series B

MANAGEMENT FEE

2.0% per annum

CARRIED INTEREST

20% above hurdle

JURISDICTION

Singapore MAS

Five Corridors. One Institution.

The five-corridor architecture is a deal sourcing and co-investment distribution network built on the same client relationships that generate private banking AUM. Each corridor contributes proprietary deal flow, co-investment capacity, and due diligence intelligence that generalist funds cannot replicate.

40%

China

Largest corridor by AUM. UHNW client network spans Shanghai, Beijing, and Shenzhen. Primary deal flow in wealthtech and cross-border payment infrastructure.

25%

Singapore

Home jurisdiction. Regulatory intelligence advantage. Primary corridor for wealthtech, family office platforms, and Islamic finance technology.

20%

Indonesia

Fastest-growing corridor by client acquisition. Shariah-compliant product demand. Primary deal flow in Islamic finance technology and cross-border payment rails.

10%

Macau

Family office concentration. High AUM per client. Primary deal flow in family office operational platforms and real estate data analytics.

5%

Brunei

Sovereign adjacency. Shariah-compliant client base. Underinvested relative to CLV per relationship.

The Series A to B Window

Venture capital returns are generated by deploying institutional capital at the precise moment when uncertainty about execution quality has declined enough for rigorous analysis to replace speculation, but before that execution quality is fully priced into the market valuation. That moment is Series A to Series B.

Earlier than Series A, subjective uncertainty is too high for institutional capital to price responsibly. Later than Series B, execution premium has largely been priced in by growth equity investors with access to the same operating data.

Meridian selects on execution evidence: revenue against plan, talent retention, customer engagement metrics, unit economics trajectory, and quality of board communication.

Uncertainty Reduction

Market opportunity uncertainty resolves before execution uncertainty. Series A is where both have resolved sufficiently for institutional analysis to add value.

Execution Evidence

Selection on execution evidence over idea novelty. Revenue against plan, talent retention, unit economics trajectory, and board communication quality.

Option Value

Series A capital buys the option to participate at Series B before the next round is priced. Option value converts to intrinsic value once the execution hypothesis is validated.

Five Sectors, One Logic

Each sector appears in the target universe because it creates a structural intersection between the venture deal and the private banking client network.

Wealthtech and Private Banking Infrastructure

Technology improving RM analytics, client reporting, and portfolio management for Asia-Pacific private banking institutions. Meridian itself is the target customer.

Cross-Border Payment and FX Infrastructure

Infrastructure enabling efficient capital movement across CN-SG, SG-ID, and GCC-SG corridors. Five jurisdictions, five currencies, persistent friction.

Family Office Operational Platforms

Software enabling Asia-Pacific family offices to operate with institutional discipline across investment management, governance, and succession planning.

Islamic Finance Technology

Platforms enabling Shariah-compliant financial products at scale. Approximately 25% of Indonesia and Brunei corridor clients hold Shariah designation.

Real Estate Data and Analytics

Data platforms for institutional and private wealth real estate allocation across Asia-Pacific. The largest alternative allocation in the client base.

Fund Economics

Target Fund Size	USD 150M to 250M
Management Fee	2.0% per annum on committed capital during deployment period
Hurdle Rate	8.0% per annum, compounded annually
Carried Interest	20% of net profits above the hurdle rate
Clawback	Full GP clawback if total fund returns fall below hurdle
Fund Life	10 years from first close
Deployment Period	Years 1 to 5
Realization Period	Years 6 to 10
GP Commitment	1% to 5% of total fund commitments
Target Portfolio	10 to 15 positions
Average Check Size	USD 10M to 12M initial, 50% follow-on reserve
Exit Mechanism	Strategic acquisition, secondary sale, continuation vehicle

Distribution Waterfall

Step 1 Return of LP Capital

All distributions go to LPs until they have received back their full invested capital. The GP receives nothing beyond the management fee during this step.

Step 2 Preferred Return

All distributions continue to LPs until they have received 8% per annum compounded annual return on invested capital from the date of each capital call.

Step 3 GP Catch-Up

All distributions go to the GP until the GP has received 20% of total profits distributed to that point, allowing the GP to reach its contractual carry share.

Step 4 Carried Interest Split

All remaining distributions split 80% to LPs and 20% to the GP for the life of the fund.

Worked Example | USD 200M committed, USD 500M gross exit proceeds

Step	Distribution	Remaining
Return of capital to LPs	USD 200.0M to LPs	USD 300.0M
Preferred return (8% x 5yr)	USD 93.9M to LPs	USD 206.1M
GP catch-up	USD 23.5M to GP	USD 182.6M
80/20 split	USD 146.1M LP / USD 36.5M GP	USD 0
Totals	LPs: USD 440M GP: USD 60M	Gross MOIC: 2.2x

Co-Investment Architecture

Co-investment converts venture exit returns into private banking AUM events. A UHNW client who co-invests alongside Fund I and realizes a 3x return does not withdraw that capital from the relationship. The realized gain deepens the AUM book.

Eligibility

VHNW clients with investable AUM above USD 5M

UHNW clients with investable AUM above USD 30M

Customer Knowledge Assessment completed

Accredited investor status confirmed under MAS

Mechanics

Offered within 30 days of IC approval

Minimum ticket USD 250K

Maximum tranche 20% of any single deal

Same economic terms as Fund I

AUM Conversion

Realized returns remain within Meridian relationship

Co-investment increases RM engagement frequency

Exit proceeds create natural reinvestment conversation

Deepens relationship beyond pure banking mandate

Synthetic Portfolio Model

Synthetic 12-position portfolio for demonstration purposes. All companies and figures are synthetic.

Company	Corridor	Sector	Stage	Initial	Follow-On	Total	%
ArcWealth Pte. Ltd.	SG	Wealthtech	Ser A	USD 8M	USD 4M	USD 12M	6.0%
CrossPay HK Ltd.	CN	Cross-Border	Ser A	USD 12M	USD 6M	USD 18M	9.0%

Return Model and J-Curve

Base Case Assumptions

30% of positions generate 5x or above gross MOIC
40% of positions generate 1.5x to 3x gross MOIC
20% of positions generate 0.5x to 1x gross MOIC
10% of positions return 0x

Winners
Performers
Underperformers
Write-offs

Base Case Fund Returns

Total gross returns	USD 523.9M
Total invested capital	USD 177.5M
Gross MOIC	2.95x
Gross IRR estimate	22% to 25% over 7-year average holding period
Management fees (10-year)	approx. USD 28M
Net MOIC to LPs	approx. 2.4x on USD 200M committed

J-Curve Projection

Year 1	USD -18M	Management fees begin. First capital calls for positions 1 to 4.
Year 2	USD -52M	Positions 5 to 8 deployed. No exits.
Year 3	USD -78M	Full deployment. Portfolio marks at cost.
Year 4	USD -92M	Trough. First positive marks from Series B financings.
Year 5	USD -88M	First exit signals. Recovery begins.
Year 6	USD -45M	First exit closes. USD 65M distribution. LP curve turns.
Year 7	USD +28M	J-curve inflects. LPs in positive territory.
Year 8	USD +145M	Three further exits. Carry begins accruing.
Year 9	USD +248M	Portfolio substantially realized.
Year 10	USD +281M	Final distributions. Net MOIC approx. 2.4x.

Governance and Risk

Investment Committee

Managing Partner

Final authority on all investment decisions. Casts deciding vote in the event of a split.

Investment Director

Leads deal sourcing, due diligence execution, and portfolio company monitoring.

Risk and Valuations Officer

Owns Monte Carlo valuation outputs and quantitative risk assessment for each deal.

Vote Requirements

New investments

Unanimous approval required

Follow-on investments

Two-to-one majority required

Abandonment decisions

Unanimous approval required

IC package distribution

Minimum 72 hours before any vote

Risk Framework

Portfolio concentration	Maximum 15% per single position. Maximum 40% per corridor. Maximum 35% per sector.
Capital access risk	Under fiscal dominance, private credit at 8.0 to 8.5% yield flows directly to portfolio company margins. Companies without strong unit economics face dilutive financing or compressed timelines. IC monitors per position quarterly.
Execution risk	Stage gate criteria at Series A and Series B. Abandonment triggers documented. Three resolution paths: bridge and restructure, secondary sale, controlled wind-down.
Valuation risk	LHS Monte Carlo generates P10, P50, P90 range. IC threshold requires P10 above invested capital and positive Expanded NPV at P50.
