Realization Period	Years 6 to 10
GP Commitment	1% to 5% of total commitments
Target Portfolio	10 to 15 positions
Stage Focus	Series A to Series B

Investment Thesis

Venture capital returns are generated by deploying institutional capital at the precise moment when subjective uncertainty about a venture's execution quality has declined enough for rigorous analysis to replace speculation, but before that execution quality is fully priced into the market valuation. That moment is Series A to Series B.

Earlier than Series A, subjective uncertainty is too high for institutional blind pool capital to price responsibly. Later than Series B, execution premium has largely been priced in by growth equity investors with access to the same operating data. The analytical edge available to a sophisticated institutional investor is compressed toward zero. Series A to B is the uncertainty-reduction arbitrage window.

Meridian's selection framework selects on execution evidence: revenue generation against plan, hiring and retention of key operational talent, customer engagement metrics signaling genuine product-market fit, unit economics trajectory, and the quality of internal reporting and board communication.

Sector Focus

Sector	Description
Wealthtech and Private Banking Infrastructure	Technology improving private banking operational efficiency and client experience. Meridian
