[Most significant development this quarter. One paragraph, three to five sentences.]

Section 2 - Fund Performance Metrics

Metric	Current Quarter	Prior Quarter	Change
TVPI	[X]x	[X]x	[+/-X]x
DPI	[X]x	[X]x	[+/-X]x
RVPI	[X]x	[X]x	[+/-X]x
Gross IRR	[X]%	[X]%	[+/-X]pp
Net IRR	[X]%	[X]%	[+/-X]pp
PME vs MSCI AC Asia	[X]x	[X]x	[+/-X]x

Section 3 - Capital Access Conditions

The question for portfolio companies in the current environment is not whether capital exists. It is whether they can still access it, and at what cost to their strategic flexibility.

Private credit at 8.0 to 8.5% yield to lenders does not stay with the lender. It flows directly to portfolio company margins, compresses exit multiples, and consumes the cash flow the capital was supposed to create. Under fiscal dominance, where sovereign issuance crowds out private borrowing and capital seeks collateral quality over risk appetite, this is a structural condition that persists until the debt load resolves.

Portfolio companies with strong unit economics, dominant corridor positioning, or strategic relevance to the private bank's UHNW client network retain access on reasonable terms. Companies requiring patient capital on the basis of future growth alone face either dilutive private credit or compressed timelines to profitability. The IC monitors this distinction per position on a quarterly basis.

Portfolio Company	Funding Runway	External Financing Required	Capital Access
[Company 1]	[X] months	Yes / No	Well-funded / Monitor / At risk
[Company 2]	[X] months	Yes / No	Well-funded / Monitor / At risk

Section 4 - Pipeline and Deployment

Parameter	Amount
Total committed capital	USD [X]M

Total capital called	USD [X]M
Total capital deployed	USD [X]M
Follow-on reserve	USD [X]M

Section 5 - Co-Investment Activity

Metric	Value
Total co-investment capital deployed	USD [X]M
Number of co-investing clients	[N]
Average co-investment per client	USD [X]K
Co-investments with positive marks	[N] of [N]
